

Adjoint And Cloud Applications Of The ECCO V4 Framework

Gaël Forget

Caltech, Pasadena

2017/11/06

-
- The 2 km CS and LLC grids, as well as descending resolution grids
 - The MITgcm estimation framework implementation charted in Fig. 5
 - The model setup subjected to forward and adjoint daily regression tests
 - The state estimate output, including model–data misfits
 - The observational data input, including weights, to the state estimate
 - The forward model input needed to re-compute the 1992–2011 solution
 - The testreport_ecco.m tool to verify re-runs of the 1992–2011 solution
 - The gcmfaces Matlab framework to analyze global, gridded solutions
 - The MITprof Matlab framework to process and analyze in situ profiles
 - The solution’s standard analysis produced by gcmfaces and MITprof
-

The Adjoint Method (A Prototypical Example)

2017/11/06

Tropical Pacific Sea Level
Difference (blue curve) and its
reconstruction (red curve) ...

Tropical Pacific Sea Level Difference (blue curve) and its reconstruction (red curve) ...

... obtained by convolving adjoint sensitivities with wind stress anomalies (Eqs. below).

$$J(T, \tau) = \int_{wtp} H(x, y, T, \tau) dx dy - \int_{etp} H(x, y, T, \tau) dx dy$$

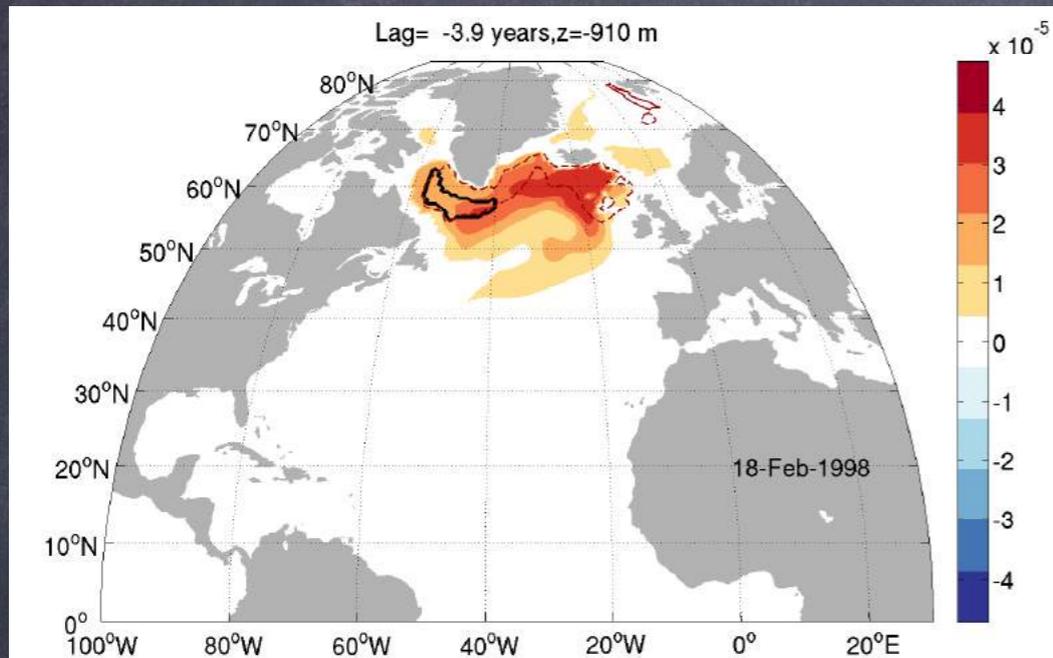

$$\mathcal{G}(x, y, t - T) = \frac{\partial J}{\partial \tau}(t - T) \text{ from the adjoint model}$$

$$K(T, \tau) = \int_{-\infty}^T \int_{glo} \mathcal{G}(x, y, t - T) \cdot \tau'(x, y, t) dx dy dt$$
